Attorney's Docket No.: 09464-010001

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicant : Marco Zuniga et al.
Serial No. : 09/475,713
Filed : December 30, 1999
Title : SWITCHING REGULATOR WITH MULTIPLE POWER TRANSISTOR
DRIVING VOLTAGES

Art Unit : 2838
Examiner : Shawn Riley

Commissioner for Patents
Washington, D.C. 20231

RESPONSE TO ADVISORY ACTION

Applicants thank the Examiner for the extended comments of the Advisory Action.

The Examiner argues that the two claimed regulators function and are designed completely differently.

Applicants disagree. The second transistor 42 may simply be replaced by a diode (see Applicants' specification page 4, lines 18-19). This results in a voltage regulator with a single transistor which functions and is designed almost identically to a voltage regulator with two transistors.

Thus, the instant analogy is not apples and oranges, but two varieties of apples.

Please apply any charges or credits to Deposit Account No. 06-1050.

Respectfully submitted,

Date: 6/19/01
